

Birmingham, Alabama

December 6, 2023

In partnership with the Specialty Equipment Market Association (SEMA), Overland Tailor Tuning (OTT) has achieved SEMA Certified-Emissions (CE) for its 3rd Generation Tacoma platform of calibrations. This certifies that the OTT calibration meets the EPA's "Reasonable Basis" criteria making its calibration legal in 49-states as it was performed in accordance with Title 40, Part 86, and 1066 of the Code of Federal Regulations at an EPA recognized laboratory.

OTT has already initiated the process to obtain a California Air Resources Board (CARB) Executive Order (EO) and expects that process to be completed in or around Q2 2024.

"We have been working on the 3rd Generation Tacoma calibration for well over a year now and are excited to bring the first naturally aspirated CE and eventual CARB certified calibration to the marketplace. The new calibration retains all the driving characteristics, power, and torque that OTT is known for, but in a CE Certified calibration. OTT is heavily invested in providing our clients with the best and safest calibrations available." said John Gobbels, CEO of OTT.

About Overland Tailor Tuning:

OTT has provided bespoke calibration services for a host of automotive platforms including both naturally aspirated, stroked, and supercharged applications. Since 2021 OTT has focused exclusively on the Toyota Platform, producing some of the best calibrations on the market. Utilizing 5-Gas Analyzer technology to ensure base emissions, and complete dyno testing on every platform prior to release, OTT sets the standard for professional calibration services.
